

# Where the Right Stretches Thin

This map applies the choromorph, a deforming cartographic technique that takes real boundaries and reshapes them according to accessibility to voluntary-termination-of-pregnancy (VTP) clinics: every point of the territory is pulled toward VTP facilities, while the more distant areas are stretched and dilated; the extent of this distortion is proportional to the distance from the nearest care centre. The 2023 data from the Epicentro portal of the Istituto Superiore di Sanità (Italian National Institute of Health) feed the algorithm, which recalculates coordinates and interpolates the deformation, thus transforming traditional geography into an immediate indicator of service scarcity: where the shape lengthens, the right to abortion becomes more fragile.
